

# Statax for LaTeX

E. F. Haghish

February 19, 2017

## 1 Statax Syntax Highlighter

```
// JavaScript Syntax Highlighter for Stata

quietly erase "'This' $Example"
noisily do 'Something' $fun
forvalues num = 5/13 {
count if vari'num' > 10 //this is a comment
scalar 5 = 2 * 10
generate x = runiform()
}

/*

University of Freiburg, Germany
*/
```

## 2 Bugs

If you'd like to help improving the package, here are 2 bugs. The first is Global Macros which can only be defined as keyword and thus, will be appearing in dark blue color. Can you help fixing that?The second bug is that I haven't found a way to highlight a line beginning with asteriks as a comment without effecting the multiplication sign.

```
* Introducing Statax package!
4 = 2 * 2
this is a $GlobalMacro that doesn't continue!
```
